Metzdorf R.;

Effect of inhibition of aromatase on gene expression and behavior in a songbird.";

Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON GRADIENT ACROSS THE MEMBRANE (SY SIMILARITY).

-I- SUBDNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE SUBDNITS: ALDHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0) HAS THREE MAIN SUBUNITS: A, B AND C (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATP synthesis; ATP-binding; CF(1); Hydrogen ion transport; Hydrolase.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                The present invention describes an isolated peptide (I) comprising a sequence of at least four amino acids, where the peptide is a substrate for conducting asparyl protease assays. (I) has neuroprotective and nootropic activities, and can be used as an inhibitor of beta-secretase activity. A beta-secretase modulator from the present invention can be manufacture of a medicament for the treatment of Alzheimer's disease. Pharmaceutical compositions from the present invention can be used for the treatment of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an isolated peptide (I) comprising a sequence of at least four amino acids, where the peptide is a substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel substrates for human aspartyl protease useful for identifying modulators of beta secretase activity of aspartyl protease for treating
substrates for human aspartyl protease useful for identifying ators of beta secretase activity of aspartyl protease for treating
                                                                                                                                                                                                                                 treating a disease or condition characterised by an abnormal beta-
secretase activity. (I) is useful for identifying agents that modulate
the activity of human Asp2 aspartyl protease (Hu-Asp2). (I) is useful
as a core structure to construct derivatives. ABL/49914 to ABL/4925 and
ABB06409 to ABB06593 represent sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Sequences (AAY32794-Y32823) are examples of polypeptide sequences found at or near the ubiquitin/proteosome complex binding site located on the intracellular part of a cell surface receptor. These sequences are used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage of the receptor. Inhibition of this proteolytic cleavage in the receptors being present on the surface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which might be present. The inhibitor is either derived from, competes with or binds to a polypeptide sequence of which sequences AAY32794-Y3283 are examples. The inhibitor may be used to treat muscle wasting, associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Signal transduction; proteolytic cleavage; renal tubular defect; uraemia; proteosome binding site; muscle wasting; aating disorder; AIDS; diabetes; Cushing's disease; growth hormone deficiency; inhibitor; ubiquitin; vascular endothelial growth factor receptor 3.
        nootropic activities, and can be used as an inhibitor of beta-secretase activity. A beta-secretase modulator from the present invention can be used for inhibiting beta-secretase activity in vivo, and in the manufacture of a medicament for the treatment of Alzheimer's disease. Pharmaceutical compositions from the present invention can be used for treating a disease or condition characterised by an abnormal beta-the activity of human Asp2 aspartyl protease (Hu-Asp2). (I) is useful as a core structure to construct derivatives. ABL49914 to ABL49925 and ABB06409 to ABB06593 represent sequences used in the exemplification

This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B3916 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent anti-IL-12 CDR3 related amino acid sequences AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences of the invention are given in AAB40064-B40067. Primers used in the identification and construction of the antiboddes of the invention is a neutralising antibody and has antirheumatic; antisclerctic; antibody and has antirheumatic; antisclerctic; antibodies or intinflammatory; neuroprotective; antibositatic; antibathmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment ö New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's complementarity determining region; CDR; antirheumatic; antiarthritic; antiscutc; neuroprofective; antiposniatic; antiasthmatic; cardiant; antiparastitic; antibacterial; immunosuppressive; Crohn's disease; multiple sclerosis; rheumatoid arthritis. This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB3948-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region acid sequences are given in AAB39517-B3956 and AAB40068-B40149. Sequences AAB3951-B3971 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibody of the invention are given in AAB40064-B40067. Primers used in the identification and construction of the antibody of the invention are given in AAB40064-B40067. Primers is a neutralising antibody and has antitheumatic; antiarthritic; antisclerotic; antibody and has antitheceptic; antibacterial and immunosuppressive activity.
                                                                                                                                                  ö
             especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human IL-12 disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis -

The invention also includes antigen binding cortions that bind to Ir-12. Sequences AAB39485-B39516 represent human action that bind to Ir-12. Sequences AAB39485-B39516 represent human action (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-IL-12 CDR3 related amino acid sequences. AAB39561-B39771 represent anti-IL-12 CDR3 related amino acid sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention is a neutralising antibody and has antirheumatic; antisclerotic; antibody and has antirheumatic; antisclerotic; antiinflammatory; neuroprotective; antipooriatic; antisclerotic;
                                                                                                                                                                                            ;
0
disorders associated with detrimental release of human IL-12, pecially Crohn's disease, multiple sclerosis and rheumatoid arthritis. ey can also be used in the manufacture of a pharmaceutical composition treat human IL-12 disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; neutralising antibody; interleukin-12; IL-12; antiinflammatory; complementarity determining region; CDR; antirheumatic; antiarthritic; antisortic; neuroprotective; antiporiatic; antiasthmatic; cardiant; antiparastic; antibacterial; impunosuppressive; Crohn's disease; multiple sclerosis; rheumatoid arthritis.

AAW05445-W05492 represent Src-homology region 3 (SH2) domain binding peptides. These sequences were used as parts of multivalent recognition unit complexes used in the method of the invention. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). It comprises contacting a multivalent recognition unit (RV) complex with a number of peptides and identifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely on sequence similarities. Prior methods only gave limited success of indicating proteins containing an SH3 domain due to the minimal sequence homology among known SH3 proteins. Multivalent RU complexes are particularly suited to screening for polypeptides containing functional comains that are similar to, but not identical in sequence to, the original target functional domain. The new method enables proteins having a common functional domain. The new method enables proteins having a common function to be identified. Identification of novel SH3 proteins will be useful for a better understanding of cell growth.
                                                                                                                                                                                                                                                                                                                                                                          ö
cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition
                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Src-homology region 3 domain; human; mouse; SH3 domain; cell growth; cellular signalling element; cellular structural element; malignancy; protein identification; functional domain; protein screening; cellular signal transduction process; binding peptide.

The sequences given in AAR40053-101 are peptide fragments derived from the Haemophilus influencae type b (Hib) outer membrane proteins Pl, P2 and P6. These peptides may be used in a vaccine against Hib infection and antibodies against these peptides may be used in test kits to detect H. influencae in a sample. The vaccine may further comprise a immunospanic or immunostimulatory molecule or the peptides may be modified with lipids, or linked to synthetic PRP as synthetic lipoglycopeptide conjugates to produce alternative vaccines.

The invention relates to a chimaeric folded protein domain, when derived from a repertoire of chimaeric proteins comprises two or more sequence segments derived from parent amino acid sequences that are non-homologous. Also included are nucleic acids encoding the chimaeric protein domains and a method of producing the protein domains.

Colimaeric proteins His-125 and His-122 were used for immunisation of a rabbit to analyse, if resulting antisera from the immunised animals are crossreactive with CspA. The animals were then challenged with an injection of folded cold shock protein (CspA) to see if a specific anti-CspA immune response involving T cell mediated help was catablished during immunisation. The analyses of the rabbit immune response showed, that immunisation with both 2f3 and 1c2 raised antisera highly reactive with their respective antisen as they bound phage displaying the chimaeric proteins strongly after the second, third and four hyaccination. Crossreactivity with CspA was observed.

The protein domain is useful in vaccination against parent proteins from which the chimaera is derived, for administration to a human for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            therapeutic purposes and for use in commercial product to which humans are exposed. The protein domains are useful for treating asthma and in immunisation. The chimaeric folded protein domain is resistant to in vivo or in vitro proteolysis by protease enzymes and is not immunogenic, and hence suitable for therapeutic purposes and to a avoid sensitisation in humans. The present sequence is the C-terminus of a chimaeric folded protein domain of the invention based on E.coli RhsD.
                                                                                                                                              Novel chimaeric folded protein domain, useful in vaccination, is c
from a repertoire of chimaeric proteins and comprises two or more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                          a repertoire of chimeric proteins. The chimeric protein comprises two or more sequence segments derived from parent amino acid sequence that are non-homologous. The chimeric protein is useful in vaccination against one or more of the amino acid sequences from which the chimera is derived, for administration to a human for therapeutic purposes, and for use in a commercial product to which humans are exposed. The chimeric protein is useful as improved enzyme inhibitors, and to avoid sensitisation in humans (for e.g., enzymes and washing powders). The present sequence is Escherichia coli cold shock protein (CspA) C-terminal peptide chimeric protein used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a chimeric folded protein domain derived from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAX04311-X04410; amino acid sequences AAX04311-X04410; amino acid sequences AAX04311-X04410; amino acid sequences AAX04311 or preventing, treating or ameliorating medical conditions can be diagnosed by determining the presence of mutations in the new polynocleotides. Specific uses are described for each of the 86 polynucleotides, based on which itssues they are most highly expressed in (see AAX04311 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                            Ferrie AM, Feng P, Greene JM, Lafleur DW;

The chimeric protein comprises two or more sequence segments derived from parent amino acid sequence that are non-homologous. The chimeric protein is useful in vaccination against one or more of the amino acid sequences from which the chimera is derived, for administration to a human for therapeutic purposes, and for use in a commercial product to which humans are exposed. The chimeric protein is useful as improved enzyme inhibitors, and to avoid sensitisation in humans (for e.g. enzymes and washing powders). The present sequence is C-terminal peptide sequence of His-ic2 protein used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chimeric folded protein domain derived from repertoire of chimeric proteins useful therapeutically, comprises two or more sequence segments derived from parent amino acid sequence that are

                                                                                                                                                                                                                                                                                                                                            16-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-AUG-;
The invention relates to a chimaeric folded protein domain, when derived from a repertoire of chimaeric proteins comprises two or more sequence sequences that are non-composed and action parent amino acid sequences that are non-chamberic domains and method of producing the protein domains.

Chimaeric proteins His-2f3 and His-122 were used for immunisation of a rabbit to analyse, if resulting antisera from the immunisation of a crossreactive with CspA. The animals were then challenged with an injection of folded cold shock protein (CspA) to see if a specific anti-cspA immune response involving T cell mediated help was established during immunisation. The analyses of the rabbit immune response involving T cell mediated help was established during immunisation with both 2f3 and 1c2 raised antisera highly reactive with their respective antigen as they bound phage displaying the chimaeric proteins strongly after the second, third and fourth vaccination. Crossreactivity with CspA was observed.

The protein domain is useful in vaccination against parent proteins from the chimmer is derived, for administration to a human for the name of the chimaer is and for mean in commercial product to a human for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           therapeutic purposes and for use in commercial product to which humans are exposed. The protein domains are useful for treating asthma and in immunisation. The chimaeric folded protein domain is resistant to in vivo or in vitro proteolysis by protease enzymes and is not immunogenic or weakly immunogenic, and hence sultable for therapeutic purposes and to avoid sensitisation in humans. The present sequence is the C-terminus of a chimaeric folded protein domain, of the invention based on E.coli CspA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel chimaeric folded protein domain, useful in vaccination, is derived from a repertoire of chimaeric proteins and comprises two or more sequence segments derived from parent non-homologous sequences -

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are solated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, hone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune discretes e.g. Addison's disease, allergies, autoimmune thyrolidis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopoiesis regulation; tissue growth; angiogenesis; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus;
                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label cound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for encode proteins. They are useful for gene discovery, and for encode proteins. They are useful for gene discovery, and for expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater than expressed sequence tag microarrays. The microarray of them is niventially for assession, with far less bias than expressed sequence tag microarrays. The microarray of the contraction of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                Human peptide #811 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                      Human; microarray; single exon probe; gene expression; breast;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 27; SEQ ID NO 11128; 327pp + sequence listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 65;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 21; DB 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                           Human peptide #891 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression nallysis is useful for sassessing the toxicity of chemical agents on calls. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human feetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein #794 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Single exon nucleic acid probes for analyzing gene expression in human hearts \boldsymbol{\cdot}

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/lublished_pct_sequences.

                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                              ö
                                   The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA2135-ABA4136). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein #873 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      exon nucleic acid probes for analyzing gene expression in human

The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           probes which are derived from genomic sequences expressed in the human brain. They can be used from genomic sequences expressed in the human which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present, sequence is a protein encoded by one of the probes of the invention.

They can be used from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                          Human brain expressed single exon probe encoded protein SEQ ID NO: 33023.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                            Human; brain expressed exon; gene expression analysis; probe;
microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;
epilepsy; cancer.

probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probes which are derived from genomic sequences expressed in the human bone marrow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

(SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention relates to human single exon nucleic acid probes
                                                                                                                                                                                                Peptide #901 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                  Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 65;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                          ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to human single exon nucleic acid probes (SENP: see AA110068-AA128459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Heia cells. The SENPs measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                 Peptide #821 encoded by probe for measuring cervical gene expression.
                                                                                                          Gaps

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide #837 encoded by probe for measuring placental gene expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
             Peptide #6468 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                    The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                            Peptide #7835 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel single exon nucleic acid probes (see AAIO0010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                        Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide #876 encoded by probe for measuring human breast gene expression.
                                                                    Peptide #796 encoded by probe for measuring human breast gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                          Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 65;

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to anceleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, prollferative
Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human peptide encoded by genome-derived single exon probe SEQ ID 25831.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histicoytosis; lymphangioleiomyomicosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia;

The invention relates for a spatiality addressable set of single exon uncleic acid probes for measuring gene expression in a sample derived from uncleic acid probes for measuring gene expression in a sample derived from the incleic acid sequences mentioned in the specification, or their complements or the 12814 open reading frames derived from the 12614 nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, omeprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung, comprising to a single from exant in the acray; identifying exons in e elexaryotic genome, comprising the label detectably bound to each probe of the array; identifying exons in elexaryote lung mRNA, to a single exon probe, to a lagorithmically prediction at least one exon from genomic sequences of the evaluation and incoarray; assigning exons, to a single exon in the above mentioned microarray; assigning exon, the probe is included in the expression of each of the exons in several comprising the expression of each of the exons in several crissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of the exons should be assigned to a single gene; a peptide comprising or expression of the exons in the tissues and/or cell types using hybridisation, or encoded by the probe expression analysis, and for identifying exons in a gene, particularly crising human lung derived mRNA and for the study of lung disease (CODP), interstitial lung disease (LLD), familial idiopathic pulmonary dysplasia, pulmonary histiccytosis, lumphangioleiomyomyty equal primary clibary dyskinesis, pulmonary hybridisate, primary clibary dyskinesis, pulmonary hybridisates. The probes does not some or probes/consistences or the exons in p and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the twipo.int/pub/published_pct_sequences. Spatially-addressable set of single exon nucleic acid probes, used to The invention relates to a spatially-addressable set of single exon measure gene expression in human lung samples Claim 27; SEQ ID No 25831; 634pp; English Chen W, Rank DR; (MOLE-) MOLECULAR DYNAMICS INC. 2000US-0632366. 2000US-234687P. 2000US-236359P. 04-OCT-2000; 2000GB-0024263. 2000US-207456P. 2000US-0608408. 30-JAN-2001; 2001WO-US00665 2000US-180312P

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contracting the array with a collection of detectably labeled nucleic acids derived from human lung the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote acids exon probe, the above mentioned microarray; assigning exons to a single gene,

comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORP). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases using human lung derived mRNA and for the study of lung disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary finemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary histocytosis, lymphangioleiomyomtosis, and hyaline membrane disease. Hermansky-pudlak syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human peptide encoded by genome-derived single exon probe SEQ ID 33138.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomcosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary dyskinesis; pulmonary hypertension;

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes show hich bybridise at high stringency to a probes, the order of probes which bybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a collection of detectably labeled nucleic acids derived from human lung; comprising (a) contacting the array; identifying exons in a eukaryotic genome, comprising or the array; identifying exons in a eukaryotic genome, comprising or the array; identifying exons in a eukaryotic genome, comprising or of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryotic genome, comprising or of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryotic genome, comprising or in the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several comprising or a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types using hybridisation to a single exon cof the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORP). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly cusing human lung derived mRNA and for the study of lung disease (CODP), interstitial lung disease (ILD), familial idopathic pulmonary disease, finamenter syndrome, spudnomenter syndrome, sourder syndrome, sourder syndrome, sourder syndrome, supplied exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pulmonary alveolar proteinosis, Karagener Syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                           Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention describes substantially purified human proteins
(referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1)
In the specification). ABN15762 to ABN27522 encode the human ORFX
proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
treating or preventing a pathology associated with an ORFX-associated
disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide
sequences can be used in gene therapy. ORFX sequences can be used in the
sequences can be used in gene therapy. ORFX sequences can be used in the
sequences can be used disorders, cirrhosis of liver,
psoriasis, benign tumnours, keloid, degenerative disorders, lamemorrhage,
osteoarthritis, neurodegenerative disorders, disorders related to organ
transplantation, cardiovascular diseases, diabetes mellitus, systemic
lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
circhage disease, various immune deficiencies and disorders, infectious
diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
arthritis, autoimmune thyroiditis, mysathenia gravis, openyments and anthritis, autoimmune infilammaton.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disease and autoimmune inflammatory eye disease. ORFX proteins are also masful for treating burns, incisions, ulcers, for treating osteoporosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for treating burns, incisions, ulcers, for treating osteopor bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis,

measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                 Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
